

## MODULE PRACTICE

### **Large amount of unique content**

Generative AI can produce a large amount of unique content, all pushing a similar narrative, which is critical as it can make a specific viewpoint appear more popular and thus become more widely accepted.

### **Algorithmic radicalization**

Algorithmic radicalization is when the algorithms progressively push more extreme content to users over time.

### **Propaganda and Misinformation**

Governments and large groups have used propaganda and misinformation to help influence those surrounding them.
